

Step-by-Step Guide to Install Python on Windows

Step 1: Download Python

1. Open your web browser (e.g., Chrome).
2. Go to <https://www.python.org>.
3. Click **Downloads** and choose “**Download Python 3.x.x for Windows**” (the latest stable version).

⚠ Make sure you download the version for Windows.

Step 2: Start Installation

1. Once the .exe file is downloaded, **double-click it** to start installing.
2. IMPORTANT: ✓ **Check the box “Add Python 3.x to PATH”** at the bottom of the window.
3. Click **Install Now**.

Step 3: Wait for Installation to Complete

- ❖ The installer will do everything automatically.
- ❖ Once done, click **Close**.

Step 4: Verify Installation

1. Press `Windows + R`, type `cmd`, and press **Enter** to open Command Prompt.
2. Type:
3. `python --version`
4. You should see something like:
5. `Python 3.x.x`

✓ This confirms Python is installed!

How to Use Python with IDLE

IDLE is Python’s built-in simple editor and shell.

Step 1: Launch IDLE

1. Click the **Start Menu** and type `IDLE`.
2. Click “**IDLE (Python 3.x)**”.

Step 2: Start Writing Code

- ❖ A shell window will open with `>>>` prompt.
- ❖ Type:
- ❖ `print("Hello, world!")`
- ❖ Press **Enter** — you’ll see the result:

❖ Hello, world!

Step 3: Save and Run a Python File

1. In IDLE, click **File** → **New File** to open the editor.
2. Type:
3. `a = 10`
4. `b = 20`
5. `print("Sum is:", a + b)`
6. Click **File** → **Save**, give your file a name like `sum.py`.
7. Press **F5** or click **Run** → **Run Module** to run it.

✓ Output will appear in the shell window.
